

Species name: blue-gum chalcid wasp (*Leptocybe invasa*)

Group: insect

Native region: Australia

Local Status: naturalised

Entry paths: *L. invasa* was likely introduced in Europe and Sardinia by trading of wood or plants of *Eucalyptus* spp.

Observations: widespread in Sardinia where *Eucalyptus camaldulensis* is present (i.e., windbreak, plantation), including the BioBlitz area. *L. invasa* is present in several countries with Mediterranean climate (Mediterranean basin, Chile, Argentina, South Africa, Australia, Mexico, USA).
