

Species name: knotweed (genus *Reynoutria*)

Group: plants

Native region (Continent): eastern Asia

Local Status: naturalized

Entry paths (if known): intentionally as an ornamental plant

Observations: The Japanese (*Reynoutria japonica*) and Sachalin reynutria (*R. sachalinensis*) have been known in Croatia since the 19th century, and their hybrid Czech reynutria (*R. x bohemica*) has been recorded only recently, but is probably present even earlier. Today they are widespread in the continental area of Croatia.
